## Amstrad's PC looks set for May launch

### COLOUR FEATURE

Masterpieces from the Art Gallery on Compunet - p12

### WORD WIZARDS

Don't miss the third part of our Wordsearch challenge see p26 for details

■ Amstrad could launch its PC compatible machines at the Amstrad Computer Show on 31 May

■ Both PCDOS and CP/M compatibility to be included?

■ Author of the operating system named

Full details below and inside

AMSTRAD's PC compatible may now be scheduled for launch on 31 May at the next

Amstrad Computer Show. The machine is likely to be in the C865-C890 range, with have a colour monitor. Digital Research's GEM graphics environment software on board and it is suggested both PC compatibility and CP/M file compatibility. It will also be sold in both floppy and hard disc versions (see Popular Computing Weekly March 20 continued on page 4)

It is the copyright in your program and other material and should remain yours - we please to not be involved. We cannot guarantee to return programs - so please do not send your only copy. Assuming Popular Computing Weekly cannot accept any responsibility for any errors in programs or pictures although we will always try our best to make sure programs work.

# Amstrad restructures Sinclair repairs and returns service

AMSTRAD is starting to pick up where Sinclair's repairs and replacement service left off. Norman Smith, managing director of Sinclair distributor Terry Black Distribution, told *Popular Computing Weekly* that Sinclair's blue label 30-day replacement service broke down about two weeks before

Sinclair did.

This meant that T&D had been unable to exchange faulty machines. Amstrad, however, has now restarted the service in conjunction with T&D, and has taken advertising in the national press, warning users to return faulty machines to their dealer, not to Sinclair.

Amstrad seems to intend to change the 30-day replacement service and one-year warranty on Sinclair products with its own facilities, but as Sinclair appears to have washed its hands of the whole matter, there may well be a fine fudge before the new service is fully up and running.

## Amsirad's PC looks set for May launch

(Continued from page 1)

Paul Bailey of Digital Research would confirm or deny that Gens would be included on the machine. I can't comment on any future plans of Amstrad," he said. "There's a lot of rumour about a 16-bit machine from Amstrad, and the probably well-placed but I think the model could be wrong on a number of points."

Although it's thought the Amstrad PC will conform to the IBM standard by having 5 1/4 inch drives, the bulk of the current wave of CP/M products is on Amstrad 3 inch format discs. So if the machine combines the ability to read CP/M data files with 5 1/4 inch drives, it would also need to be able to cope with an external 3 inch drive.

Amstrad approach Timex Systems, it is widely thought to have written the PC's operating system and Timex was showing a 5 1/4 inch external drive for Amstrad's CP/M machines at the Amstrad show earlier this year. Nick Young of Timex claims the 5 1/4 inch drive on the grounds of its greater capacity.

Timex's 5 1/4 inch drive does however allow Amstrad's CP/M machines to read PC-DOS data files, so the company's experience here seems it is well placed to do the job in reverse for the Amstrad PC. Young himself conceded that more details would be forthcoming at the Amstrad show.

Amstrad itself seems to have been in two minds about the machine's launch date, recently being cancelled a large store booking at the June PC User show. This has prompted speculation that the machine isn't ready, or that Amstrad doesn't want to harm sales of the PC1612 machines, but one dealer who has been ordering them heavily claimed to have been told there was "something much better" due in the next two months.

This would place it nicely for the Amstrad show, and would conform to Amstrad's policy of not changing its dates. The company makes a point of not pre-announcing launches, but immediately prior to the launch will suggest to dealers that they shouldn't invent too heavily in waiting stock.

## Mirrorsoft features Biggles at UK CES

MIROSOFT companies exhibited for the first time at Britain's Consumer Electronics Trade show held from April 30-23 at Kensington Olympia.

Biggles

While the number of software firms taking part was fairly small, there were plenty of new offerings on show.

Microsoft had one of the

most prominent stands, and were pioneering Biggles the game based on the forthcoming film, and a version of *First Blood* by the CPC 6128. Jim Macdonald of Mirrorsoft also said that its Amstrad PC1612 *First Blood* edition will not now be released until this autumn.

The company also displayed its new range of 486-based 16-bit software and announced a forthcoming arts creation package for the Atari 27 Art.

Mikro-Gen (previously a new shoot-em up for the Amstrad CPC) called *Space* while Mastertronic launched its Entertainment USA range a series of 22-bit titles specifically written for Mastertronic by Amstrad programmers.

Both Level 9 and Reinhard took stands with the former announcing that the latter would be publishing for Commodore Dingo, a browser version.

of the original *Colossal Cave* on the PC1612 and QL machines.

Software on cassette was being heavily promoted at Electric Software's stand while, on the peripherals side,

Chessit's sound sampler

Chessit displayed its Amstrad version of the Spectrum and a new sound sampler at £49.95 for the Spectrum 48128. Also on the Spectrum, Chessit has developed a MIDI interface at £49.95 with a 128 to MIDI lead at £9.75.

## Mikro-Gen joins the budgeteers

MIKRO-GEN is set to launch a £2.99 range of budget games, following on the lead set by Ltd Gold (see *Popular Computing Weekly* April 10). The complete range has yet to be finished, but according to Mikro-Gen's managing director Mike Mack it will be heavily on the company's list of years gone by.

One of the first releases, for example, will be a double tape of *Conquade* and *Glaxious* (the idea being, according to Mack, that there's a bargain place in the market that will just pay £3-4). The range will also include new titles, but won't initially include current products like *Drive* or *Warrior*. Once these have dropped out of the charts, they're liable to reappear in either single or double £2.99 games.

## Apple announces new Mac — but no price cuts

APPLE has announced a new version of the Mac with operating system enhancements and the new 8008 chip.

The new model is to be called the Macintosh 128K/200 and fits into the range midway between the existing 128K Mac and the Macintosh Plus which was launched at January's MacWorld Computer Show.

The new disc drive, introduced on the Plus, is a double-sided model and the operating system has been increased to 128K and put into form which exists for faster disk access and graphics handling. UK buyers will get a bonus in the

form of the new keyboard incorporating numeric keypad. US customers will have to wait for the older version.

Price for the new model is £1,699 and it will be introduced on May 1. The existing Mac 512 will be dropped but an upgrade kit will be released to allow Mac owners to upgrade in stages through the 512/800 up to the Plus.

This announcement puts paid to any hopes that Apple would eventually bring down prices to compete with the Atari ST. It is now clear that Apple will maintain pricing and offer extra features instead.

## Tight fit

I refer to your issue dated March 27 in which Andrew Nightingale wrote that he was having trouble loading programs with his C24, which is over 12 months old.

I too had similar problems, but I have managed to cure them by carefully bending the metal spring clip where the top of the cassette fits into the C24. This moves the cassette to move tightly into the unit and therefore enables the very critical impurities to be placed up correctly. I assume that this clip tends to weaken with use so that the cassette is not so tight fitting against the tape heads.

I hope this solves the problem.

Paul H Nash  
Glasgow Police  
Division

My current project has made an audio tape of computer generated music, while I program extensively myself within this field "many hands make light work" and co-operation means success. This tape would be sold as cheaply as possible. With all proceeds going to the A.R.C. fund.

All types of music are acceptable - classical, jazz, folk, electronic, etc. While I can offer no prizes your contribution would be duly acknowledged on the cassette by name.

Programs should be sent to the address below, should they be in Commodore 64 mode, a tape or disc will be acceptable (returnable on request). Other computers would require an audio tape. Please specify program also used where applicable.

Great or small - contributions will be acknowledged.

Dr J Mills

Maiden  
Bristol BS10 2NR

## Unusable QL?

Now that Amstrad has taken a simple range of computers under its corporate wing and is intending dropping the QL, I would like to know (as I am sure do many thousands of QL and Spectrum owners) if the company intends to carry on manufacturing microdrive cartridges. I know they are non-standard and quirky (although they've never caused me any problems) but if they were to disappear, 48 QL owners will find themselves with no mass storage media - unless, of course, we all fork out a couple of hundred pounds for a disc drive.

This surely would be an unprecedented situation for an underpowered home macro. The QL would not only be rendered obsolete but unusable once all the users' existing cartridges were used up.

Phil Baxter  
Whitley Range  
Spartanburg

## Computer music

As a local organizer for the electronic and rheumatism control for research, I am appealing through the magazine for assistance from computer users with an interest in music.

This A.R.C. is celebrating its 50th anniversary and depends extensively on public support for funds which are donated towards medical research within this field.

processor. Admittedly, the width of the data bus does make the 68000 slower than the 68010 and the 68010 slower than the 68020 but this is only by a few per cent. Internally all three processors are 32 bit.

The massive added memory makes the QL faster than nothing whatsoever to do with the screen update. The 68010 in the QL runs at 7.5 MHz but the 6811 memory chips inside are not capable of running this fast, so the 68010 is slowed down when accessing the external memory to allow for these slower chips. Modestly increasing expansion units use new faster chips which are capable of the high speeds necessary. This now allows the CPU.

The screen update does slow the memory access up, but does fit in the external memory as well, as there is only one data bus. The video I/O grabs the data bus and stops all memory access by the CPU.

K.A. Unsworth  
Gwyn  
Alders

## Big-ridden

A simple case of an Amstrad 5085? I have to conclude that the glowing reviews of the machine must be written by programmers certainly they cannot have tried to enter any serious applications in Basic!

This interpreter has a whole host of errors already available. The Galaxy command position the cursor but not where it should and what the error can be overcome by flipping the window, huge areas of display then disappear. Assignments, such as A=B following an IF Then statement, often corrupt the interpreter which then regards the variable name as a reserved word repeating later occurrences of the name. For example, are randomly rejected unless wholly contained within a single line, and I/O Save, Print etc often cause the machine to crash.

There are other bugs also but perhaps the worst affect file handling. These routines are so shot through with faults that they are unusable. Don't load and

## THIS WEEK'S PUZZLE

### Puzzle No 200

When Luigi was a page of one million he on the national lottery hit opened a bank account for the money. The account paid an annual interest of eight per cent, paid daily. The interest due every day 63000000 of the amount in the account were added to the sum, the bank closing the sum to the nearest dir.

Exactly seven days after leaving the money Luigi noted that the amount remaining in the account was just ten less than half of the amount originally invested.

Can you find how much money he withdrew on each of his weekly visits?

### Solution to Puzzle No 199

The three possible values for P are 14, 15, 16, 17, 18, and 19 giving values of (respectively) 144000, 144000 and 144000.

Continuously with initial value in the range 100 to 1000 the values are converted to a string. Lines 10 to 110 check each character of this string in turn to determine if it matches one of the three beginning digits. Each

time that this happens, the only variable (I) is incremented by 100.

```
100 FOR I=100 TO 1000
110 IF I=100 THEN GOTO 110
120 IF I=100 THEN GOTO 110
130 IF I=100 THEN GOTO 110
140 IF I=100 THEN GOTO 110
150 IF I=100 THEN GOTO 110
160 IF I=100 THEN GOTO 110
170 IF I=100 THEN GOTO 110
180 IF I=100 THEN GOTO 110
190 IF I=100 THEN GOTO 110
200 IF I=100 THEN GOTO 110
210 IF I=100 THEN GOTO 110
220 IF I=100 THEN GOTO 110

## Write Hand Man

**W**rite Hand Man is a marvellous, if somewhat dubiously titled, utility imported from the US by Microsoft. It has been modelled on a famous program on the IBM PC called *Stratview*, to see if an OS/2M is an eye-opener.

The idea is that the program is loaded into the part of memory that holds OS/2M itself, taking between 3 and 5K in the process depending on which option you choose. When running OS/2M programs you will never see that this memory is missing (eg. *Microsoft*) but with others the loss may be more critical. This is particularly true when using OS/2M 2.2 where the programs may have had to be requested in.

Write Hand Man also has some completely exclusive and a special key combination is granted. The program you are running is frozen (periodic beep) and a pop-up menu appears giving you several options.

The options are to look at, or enter, notes in a catalog file, study your diary for the next two weeks, look up a phone numbers file, get a directory, ask a calculator or view a

text file on disc (potentially very useful when using a word processor). Windows-style editing keys are used for entering data.

There is also a construction program supplied that needs to be installed for your particular hardware. Your own purpose written programs can also be called up if they fit within 15K.

When finished you are then returned back to your main program exactly where you were before you started.

The drawback is that you need to have the appropriate program files and data files on a disc at hand at all times or the whole thing becomes problematic. This is really not a great

handicap, as unless you have lots of data very little room is lost on a disc. You also have to be committed to keeping things like the diary up-to-date.

On the whole, it is perfect for those who spend a lot of time at the keyboard and who often have two things to do at once. It also suits those who like to write everything down in scraps of paper and then lose them. It makes a perfect complement to OS/2M programs such as *Newsword*.

**Tony Keadell**

**Program:** Write Hand Man **Price:** Any Amstrad OS/2M Price £25 **Supplier:** Hooft, 180 High Street North, Dunstable, Beds LU2 8AT

## Workbench

**I**t would appear that Talent is on to yet another winner with their latest release, the Amstrad Workbench. Virtually every conceivable facility is contained in a single machine code development package enabling a programmer to assemble about 30K of source code on an unexpanded 64K directly into memory, larger programs may be accommodated with microdrive, floppy or memory expansion options.

Compact and elegantly designed, the Workbench includes a full screen editor, assembler, monitor and disassembler. Access to the complete operating manual may be made on-screen utilising the detailed index, while the program is running.

Devotively user-friendly, the assembler can operate in the conventional two-pass mode or as a one line assembler. The latter facility allows direct

modification of machine code using the standard 8088 processor instructions.

Trace facilities allow a user to single-step through an entire program, whereas on-screen successive instructions are disassembled and printed. Alternatively, up to 25 trace points may be placed in Roman Point areas for use with parts of a program. A command is included in the operating system whereby users may probe 8088 routines during a normal single-step trace.

Dual addressers are provided primarily for debugging graphics displays or they may be set up for a disassembler dump comparison. When disassembly of a sub-routine is completed, the normal display may be restored and the original disassembly resumed.

A facility is included for programming the five function keys for use with OS/2M and the relevant function key number.

The screen editor, which can be used independently of the monitor and assembler, can

operate from Rom routines or disc files for modifying assembler or SuperBasic programs or as any text file.

Only one minor point arose during this evaluation which I felt could be improved on. The monitor line lengths are limited to 132 characters. Whilst more than adequate for the majority of applications, some types of Man (eg. text games) could require a larger capacity.

Talent's Amstrad Workbench represents not only good value for money but is a well planned language utility. The screen editor alone is worth the price of the package. Workbench is probably not suitable for the absolute beginner: those starting with machine code couldn't however do better than this.

**Peter Murray**

**Program:** The Amstrad Workbench **Price:** £14.95 **Supplier:** Talent Computer Systems, Carven Buildings, 104 St James Road, Glasgow G4 8JG

## Simple Accounts

**S**ince when has doing the books been easy? Since the 18th February this year - that is when *Simple Accounts* for the Amstrad CPC range to the Amstrad PCW range.

Setting up *Simple Accounts* for the first time doesn't take quite a while after making your working disc (backup) you define a template. Before you enter any data you must name the file, you wish to use. A reference refers to a day, a week, a month or year. Date numbering is automatic, but can be switched so that only 260 entries can be made per file.

When making an entry you give the date, a classification number, which is the column to which the entry is to be made, a reference (which can be anything you like), the amount of the transaction, the VAT and the payment reference.

When all entries for one file have been made, they can be looked at and analysed in a variety of ways. A straight forward list of purchases/sales can be made which may include either all entries or those within or outside the scope of 'VAT'. This list returns the entry number, the date, the payment reference, the reference, the entry total and the VAT for each item, that complies with the requirements.

You can search for entries that have the same payment reference, the same sub-reference or fall into the same column. Analysing produces a summary of transactions for each column and gives the total amount with and without 'VAT'. VAT reports can be made which summarise the VAT input and output for any total, and calculate the amount you owe to Customs & Excise.

The program is totally menu driven, which makes using it easy for just about anyone. Information, such as lists of entries can be printed to either the screen or the printer and are neatly formatted.

**David Wallis**

**Program:** Simple Accounts **Price:** £24.95 **Supplier:** Amstrad PCW 8056 **Supplier:** Camla Software, 35 Kilmacshann Street, Hydon, Here, SG8 5AA

## Hardware: Reviews

## Widi Interface

**O**ver the last couple of years the Commodore 64 has been recognized as the best all-round value-for-money multi-computer with applications ranging from music to navigation with its built-in 6502 sound chip to very complex control of professional synthesizers when fitted with a 1401 interface.

In the past few months the capabilities of the EA have been expanded to almost unbelievable levels with the announcement of new music packages from Germany and America. One good example is the Pro Music from Steinberg, which at its name suggests is a (Scheisserei) MIDI composer.

As I've indicated, you'll need a Mini Interface to run the package, and Standard makes two — one at around \$130 and a simpler version (packing sockets for tape synchronization) and an optional heater. The Pro II software is around \$90, and incidentally is available in an Apple version too, with a Mechanical Atari 520ST version forthcoming.

The cost of Midx synthesizers capable of taking advantage of the Steinberg software is plummeting, with the amazingly affordable Casio CZ-101 reportedly in the shops for \$249 each. The CZ1 is unusual in being able to play four notes with four different sounds simultaneously, as well as being able to play four or eight-note chords with a single sound.

But the Pro Macintosh can be used with any MIDI instrument (this includes drum machines, other sequencers, MIDI home keyboards, effects units and so on).

The Pro II package will allow you to record and arrange musical pieces entered from the on-board keyboard, either in Stop Time (every note you write plays back with a set length regardless of how long you choose to hold it) or Real Time (which is exactly as you entered it).

**Notes:** All major functions are shown on road cross-sections.

The larger **libl0** interface is a flat grey plastic-like box with the connectors on the rear for MIDI In and Out and jack sockets on the front for synchronization to a tape-MIDI smart machine, to tape and for connection to a programmable keyboard. Red and Green LEDs indicate when MIDI information is coming into or leaving the interface so if your musical compositions aren't right you'll have a good idea of where to start.

The software allows 48 polyphonic tracks of music to be recorded - the Real Time option includes a 4-minute tape - and the maximum length of one section is 99 bars of any time signature. Hornell

you'd assign each channel to transmit on the Mid channel of the same number, so that Channel 1 would control a synth set to Mid-channel 1, Channel 16 would control a synth (or expander or drum machine) in digital-busset and to Channel 16, and so on.

A song slot pattern's long can be defined and this can, of course, be stored in a numerically ready parameter such as tempo and ball channel can be changed while the music is playing. A series of moving vertical bars indicate that there's some activity on each channel, and other readouts show bar and beat number, memory remaining and so on. Total capacity is 100 slots and most of the functions are controlled simply from the Cursor, Function and Shift keys.

The software will record and play back almost any information which can be transmitted by MIDI, so that includes notes, pitch (sound) changes, pitch bend, modulation (vibrato), keyboard velocity (effects the loudness of the note on many synths) and so on.

The computer can hold 84 patterns at a time and you can prepare patterns in three ways - Real Time, Step Time (entering single notes or chords from the synthesizer and spaces with the spacesbar) or recorded real time. This means you can auto-correct your playing without a misplaced note affecting the recorded pattern. The computer also moves the pattern you're playing a eighth, 16th or even 32nd beat. Very handy for those whose synthesizers or the keyboard records their stuff too.

The whole package is laid out in imitation of an unusually flexible 16-track tape recorder: each channel number active at any given time is blocked in green, and inactive channels are white. Underneath each channel is its full transmission channel number which can be entered after a pause is recorded — a feature you won't

Steinberg Mixer

find on stand-alone MIDI sequencers.

A simple second page shows you to time-shift tracks to compensate for any sync problems, and you can use this page to create long delays or short stereo-pile effects using two synths playing the same sound. And there are some very handy functions on the third page too - if you simply press the A key on the computer, every single connected synth sounds an 'A', for instance.

The same Steinberg interface will, as we mentioned, run a Mid-Casin C2-101 editor

as well as a Yamaha D07TEXT editor, an interesting thing editor, and a comprehensive Score Writer for transcribing existing Pro 10 sequences like all at once, cost and purchased separately. So you could compose a piece on the Pro 10, record it direct from the synthesiser, and prepare a professional quality transcription in standard musical notation at the same time.

Now that the cost of the G46 has dropped, the investment needed on MIDI synthesisers is less significant. Luckily they have come down in price too, and will

continue to do so over the next couple of years. If you do go for the Pro 10 you really are getting a professional music system, but one which is incredibly easy to approach and operate.

## It's not all jungles and chit-chat

*Christina Erskine looks at artist Hugh Riley's (left) work on Compuserf - a selection of which is shown here*

One of the most successful features in the Commodore-specific database Compuserf is its Art Gallery section. Here, budding artists can upload pictures as well as - and as an artist - simply as a display for other talented fibres to flip through and view. A new section called Live Action has also been set up to cater specifically for animated demonstrations, which can include music.

Compuserf editor Jane Pirbright has run several competitions within the Gallery,

which has stimulated interest both from participants and those who just want to see the pictures. The best artists frequently come out top of Compuserf celebrity votes compiled by subscribers.

At any one time, there are usually 40-50 artists displaying one or more works of art on their pages.

Among the Gallery's most prominent and prolific artists are Bob Ste-

ret-to-Berkeley's Dan Dare and Hugh Riley.

Hugh, an unemployed art collage producer, was introduced to Compuserf when he won the Commodore International Art Challenge in 1984. A modest win, part of his £3000 endorsement prize, Compuserf

Excerpt of Hugh Riley's work, which can be seen on Compuserf's Art Gallery section.

weiss, who has gone on to design loading screens for Firebird's Thruxon and its forthcoming game Empire (St Jackson, who has written the loading screen for Virgin's

had just been set up, and Hugh got going.

An enthusiastic member of Compuserf has taken part in many of its sections, but it is his art in the Gallery that most subscribers want to see.

Compuserf always fully encouraged me right from the beginning," says Hugh. "I paid for my first screens for a start putting them in its free Hall of Fame pages, which encouraged me to create more pictures for it. I started with line-art pictures, just using the Commodore keyboard, but for the more recent hi-res examples I use the Autodesk Koolaid pad.

"More recently still, I've been doing animated pictures for the Gallery - I did a lot of animation work at Art Collage.

His animated picture attracted the attention of Commodore UK in Gorty, which provided Hugh with the software to create a series of animation sequences on the Amiga, which will be strongly featured in the Amiga's UK launch at the Commodore Computer show next month.

One of Hugh's personal favourites in the Amiga's hi-res example pictured here. The tiger is a picture created on the Amiga, showing off the effects created by the choice of colours on the machine.

To see Hugh Riley's work on Compuserf the Art Gallery can be accessed by Compuserf subscribers on page 900. Anyone wishing to join Compuserf should contact the database at T115 Mirvies Road, London NW10 8NU.

## Sport of Kings

Here racing games don't have a happy history. I remember one including a race between the two mile flat races while another was totally unplayable - which was probably in its favour. It's a surprise to find this in the up-market M400 range - Mastertronic's way of saying that this game is a little bit better than the norm. Usually true - witness *The Last VR*.

This makes reference about it - betting in the sport of kings. Up to five people gamble imaginarily money on imaginary horses which may or may not get your adrenaline going.

It is all controlled by the obligatory menu which doesn't work as smoothly as some I've seen. Maybe I'm over 1 such a good idea after all. Difficulty levels are based on an optional number of variables, real machines going for jockeys, weights and ground as well as horses and distances. To play the game properly you need a mathematical mind capable of juggling 30 different data at once - not least mistakes.

Win each way and financial bets are allowed and some care has been taken to try to simulate the irregularities of following form.

The program uses the Camel speech unit if you want to hear the commentary as read by a superior grade of Camel and there is a printer option which I'd say is almost obligatory if you want to keep proper track of the form book otherwise you'll spend all of your time scribbling notes and reducing tables.

So there is all - with reasonable race graphics - and this is a winner but in a very small field.

Reasonable means the grass looks green and the horses have at least four legs. It rates as moderately visually exciting but no more.

If you're a gambling addict it may help you through Sunday and raised odds cards but otherwise its main value is as an object lesson in how nobody beats the system.

John Mason

Program *Sport of Kings* M400 Spectrum 48K. Price £2.00 (all Suppliers). Mastertronic Ltd. 8-10 Paul St, London EC2A 4LJ.

## War Play

There's been many a good idea spoiled by poor execution and *Amos & War Play* is a perfect example.

The idea was to take the key elements from the war game scenario, dress them up with detailed 3D graphics and turn the whole into a combined

all-flags/strife game.

You can play against the computer, or against a friend each with controlling a military force comprising fighter and bomber planes and tanks.

The action takes place against a scrolling 3D background of airfields, armed compounds and wooded areas.

There are random elements too, such as the anti-aircraft missiles that whip across the

time rings in each of three time zones.

If you've not guessed by now, *Jack* is a maze game with a time against time, as too much exposure to the rings radiation leads to loss of life. However, time's an extra life for each five rings collected.

The most interesting feature of the game is its scale - it's big. This means that to plot the best route you have to check the neighbouring screens - the initial approach isn't always the best when it comes to dodging the obligatory bouncing

robot.

So far so good. But in one-player mode, it plays about as well as a pocket with boring gloves on. The controls are difficult to control and the lack of shadows makes it impossible to gauge height - crucial for bombing runs.

I had a lot more success with the tank but that too kept lurching blindly into walls and jamming against trees. To be fair, *War Play* was designed as a two-player game and it's far better in this mode where the competitive aspects make up for some of the problems. Far from anti-stuttering though.

As a budget-range game say about £2.95 it would be acceptable, but at full price it isn't as recommended.

Peter Wardle

Program *War Play* M400 Commodore 64 Price £1.95 (E10.95 on disc) Supplier Amos Software Unit 10 Victoria Industrial Park, Victoria Road, Bedford Kent.

## Jack

By the year 2112 AD an-roid design will have reached such heights that they'll look like animated droids - but at least they'll also have cute names like Jack.

Unlikely, they'll also be able to get lost in time, which is what has happened to our garage car man.

His only hope of a happy homecoming is to locate the 32

time rings in each of three time zones.

stand Damage attitude compass, fuel, ammo, power, speed and attitude are among the most important.

Your task is to intercept enemy bombers deployed on a map screen showing your lo-

location.

It all calls for some little planning and a bit of experimentation.

Nothing original there and nothing particularly exciting, even at the budget price - but it should hold your attention for a few hours on a rainy spring Sunday.

John Mason

Program *Jack & the Time Rings* M400 Spectrum 48K. Price £1.95 Supplier Atlantis Software Limited 10 Preston Street, London N1 8PY.

## Wing Commander

With *Diggle* taking to the air, and Microsoft bringing out more and more sophisticated flight simulators such as *Acrobat*, it seems that the popularity of air battle games is endless.

Mastertronic has released *Wing Commander*, formerly a full-price Creative Sparks title, at just the right time by the looks of it. Neither too complex nor too demanding, it maintains the traditional air combat without sacrificing all the demands of realism.

The screen presents the fe-

land base before they destroy your targets. You must then return to base and slow down enough to safely land (although I admit that I haven't yet made it this far).

The combat and refuelling sequences are exciting and the graphics and sound generally very good.

An excellent purchase at £1.95 though not complex enough for simulation heads or action-packed enough for pure arcade fans.

Chris Jenkins

Program *Wing Commander* Type Arcade/simulation. M400 Commodore 64 Price £1.95 Supplier Mastertronic 8-10 Paul Street London EC2A

## Golf Construction

**W**hether you're into football, tennis, baseball and American football — not to mention tennis offerings like *Conquest*. There have also been a few attempts at golf but none to match this release from AmigaSoft.

**The Golf Construction Set** is one of the most intelligent sports simulations yet to appear and remains an extremely enjoyable game.

The list of features is vast: four actual courses including Royal St Georges and Wentworth; a full set of clubs — five woods, nine irons, putter and wedge; and pitching wedge made rated for difficulty and distance, variable weather and course conditions, and realistic handicapping.

You start the game by selecting a course and either pre-set or definable weather. Con-

ditions like wind, air temperature and how hard the ground is have an effect on the length of your shot. Club selection, direction and power in the swing are joystick controlled. Ad-

vanced players can also attempt to deliberately hole or miss their shots.

The graphic displays are excellent. You get a plan view of the hole showing the fairly rough bunkers and water hazards, together with pin placement on the greens. Graphics alongside the display indicate slope, scores and along the hole, as well as wind strength and direction.

A 3D display gives you a realistic view of your ball as it travels into the woods, takes a spin, bounces or simply drops out of bounds (I said it was realistic).

When you master the four pre-set courses, you can begin designing your own — including them as existing courses or dreaming up nightmares from your imagination.

If you and your M have already won every Olympic gold medal going, taken Fulham to the FA Cup Final, re-gained the Ashes, and paddled a kayak over Niagara Falls, **The Golf Construction Set** for its endless new challenges. Whether you're a golfer or not it's highly recommended.

**Peter Workless**

**Program: The Golf Construction Set**  
**Micro Commodore 64 Price:** £14.95  
**Micro Spectrum 48K Price:** £12.95  
**Supplier:** AmigaSoft, 68 Langdon Road, Clonsilla, London WC2N 3JH

## Starstrike II

**L**ong time no *Starstrike* — was once a master of vector 3D games and of those *Starstrike* was the finest, reducing even a cynical reviewer to tears of *Whooeee!* and an unholy bloodlust as I blasted the aliens.

Suddenly it's back with a sequel, only now the enemy craft and battle-stations are shaded and solid looking.

First up is the almost obligatory pseudo-3D screen, adding a degree of realism to the wholesale slaughter you're about to unleash. You need to choose the star system and planet therein for your first bout of outsider extermination carefully as some are less well defended than others. After this you'll find yourself flying towards an enemy space fleet with no defence (apart to blast before docking, it's up to you to co-ordinate with the station so that you can dock). Doh! No, that you can dock there?

Next comes the fire, which hangs and which is constantly opening and closing. Blast it into space again to take on the other fighters. This is a question of using your radar carefully and calls for extremely sharp reactions.

The ground attack provides some planet flying and blasting and leads to a mission duration before you

interpolate the planet and move on to the next one.

Good solid stuff with graphics that are completely smooth but somehow I failed to thrill me quite as much as I remembered.

Still, I can think of far worse ways to spend my time.

**John Merson**

**Program: Starstrike II**  
**Micro Spectrum 48K Price:** £7 to **Supplier:** AmigaSoft, 68 Langdon Road, Clonsilla, London WC2N 3JH

## Sodov the Sorcerer

**A** sorcerer's life is interesting — so much so that the hero of this game is reduced to shouting the names of the dinosaurs which charge his castle gates. Meanwhile the YOPs (your own people) course apprentice after away at the pot in the backyard, a tender morsel for a hungry monster.

As the alert Sodov patrols the castle battlements, blasting away with cross-hair magical targeting. His aboriginal ancestor turned the Sorcerer into gold.

His shots are strictly limited

unless he seconds a tower and shouts to his lucky star.

However, while a cloud conceals the heavenly spirit, there's no recharging, and worse — bolts of lightning zap his strength as does an unfriendly red spider.

Eventually a reptile will reach the gate and crawl it up at which point Sodov has to make down the tower and if he fails to zap the kidnapper before it escapes the apprentice attack. It's out to the second screen. Here Sodov lays mine with the cross hairs in an attempt to rescue his assistant. While waiting for the dinosaur to destroy itself he can run round collecting the gold. Then

he drops his YOP into the castle, because if he loses all three youths he's a gonner — as he is if the dinosaur's reach him or blast him too close with their breath.

It's a lively scenario with attractive graphics, but the game lacks playability and though it's an unfortunately named and original what it is, it's not because interesting, so you too may find yourself shouting 'Sodov!'

**John Merson**

**Program: Sodov the Sorcerer**  
**Micro Spectrum 48K Price:** £2.95  
**Supplier:** Bug-Byte, Liberty House, 332 Regent Street, London W1B 3PS

## Twister

**W**hether you're into what will turn to human form? Twister the classic board game is back, according to System 3 which has produced a nice family game — the family being the mother and daughter team of Twister and Cherliffe. Only one end is pure of heart and mind can do battle against this evil — or failing that, a computer game player!

Despite the packaging blurb which is a fine line of censure

murder-jumble — warped enough to have any fundamental learning of the myth. Further turns out to be nothing more than a wheel spin up — proof it needed, that the battle against evil is just glorified Space Invaders. Ahh, but what a shock! I say. This is just the thing for anybody who has become all shocked with overly sophisticated games.

The first section is necessarily simple: all you keep score what looks like typing typewriter keys collecting mystical symbols and blasting the hordes of darkness. The next stage is more difficult though

as you warp from one side of a grid to the other still blasting and collecting. So you move from dimension to dimension until you face the wrath of Twister herself.

This is enhanced by some gloriously grotesque graphics for the monsters and a well balanced game play making Twister a good, fairly readable diversion.

**John Merson**

**Program: Twister**  
**Micro Spectrum 48K Price:** £7 to **Supplier:** System 3, Davis House, 26 Hatten Garden, London EC3N 4DA

# Commodore and Amstrad conversions – an update

*Tony Kendle with the latest news on many long-awaited conversions of successful titles. Plus: the first part of the complete solution to Gargoyle's Marsport*

**B**ecause the Spectrum and Amstrad computers share the same Z80 microprocessor it is not uncommon to find that both versions of a game are written by the same team, but when it comes to the Commodore, there has to be some expertise brought in and sometimes a new game results.

This has happened recently with the extremely successful and widely acclaimed release of *Zeke*, the Commodore version of which seems very different to the Z80 ones. We've had a few tips for the game already but I would like to ask anyone who has any info for the game. In particular on the Commodore version, to send it in.

Whilst talking about conversions, any readers who were put off by the recall of Amstrad *Cherry Firebird* may be interested to know that all problems have now been fixed and that a fully working version should be in the shops at the time you read this.

just a shoot-up without any real technical innovation" seems to be the general verdict. Being more of a professional and a fan of shoot-ups, I will personally reserve judgement on *Cyberman* until I've played it longer.

It seems that *Ultimate* can't win these days, and it makes me wonder whether there has been a shake-up behind the scenes with the departure of publisher from the good ideas. The problem that game has (Glen's Danish received) compared to *Rightshade*, shows that it isn't just the idea of 30 games (for example) that people are bored with – there is still a market in the plot in good.

Commodore owners are perhaps in a better situation in that they have a steady trickle of often excellent software from UK Gold, most of which is already in the can when the adverts appear. This level of competition has put off some home computer software companies from attempting Commodore conversions, but the good news is that *Gargoyle Games*, producer of our most consistently innovative and high quality releases, has retained on its *in Commodore* policy for its next game, *Heavy on the Mallet*.

Everyone who has seen this in the office has been knocked out by it – the quality of the animation and the range of fun are outstanding and Roy Carter of *Gargoyle* promises that it will be a long time before anyone copies this one.

Sticking with *Gargoyle* for a bit, readers who ordered copies of our *Amstrad Cherry Firebird* will no doubt be making good use of the *Marsport* map that it contains. However, to mark the completion of the new game we will give the complete *Marsport* solution over the next few weeks.

## Sense of fun

If I assume that everyone has got at least as far as getting the gun and knowing how to keep it charged. For those who haven't seen the map (I repeat, the point that the top warriors move in consistent directions) around a square – if you know which way they go you can often avoid them altogether. If you meet a rept coming at you in the middle of one corridor you can be sure that if you keep walking the next one will be in the middle of the next corridor, and so on. When entering a new area or a part where the rept go in both directions, wait until one comes into sight

*Heavy on the Mallet* from *Gargoyle Games*

and head towards it. It is a strategy you can be sure not to bump into them at the corner.

Warren robots can go in any direction and are much more tricky. You can well wound until you see them coming, but even this is not foolproof if you want to go into the corridor that they come from – always save the game when near them.

The first task is to get the boiling tar, water and flour from *Daisy* level. Go to the factory in *Daisy* and *Factor Three* to make a cake. The cake is the key to the factory in the factory you will find some dough.

Back on *Daisy* level you will find some charcoal – keep this.

To go through the danger door on this level you must take the dust bomb and put it in the refuse street. Do this every time you pass through. Once through you will find access to many more levels – most immediately *Daisy* and *Lava*.

The next job is to get through the danger room on level *Lava C*. To do this you need a gas mask, so combine the pease you find down on *Jelly* with the charcoal to make a gas mask. With this you can enter the danger rooms. When the bomb has gone off, place the gas mask in the locker in the danger room for further use.

Once through you will be able to find the ice room which contains an ice pack and a scented (good?)! More next week.

## General verdict

For some strange reason, the whole industry seems to have trouble keeping up with conversions for Amstrad machines. It's all too common to see the words "Amstrad version soon" (or which we can sometimes read "possibly never") in the ads which is strange for what is, after all, the best-selling new format since for years.

Another Amstrad release that we seem to have been waiting ages for is *Manly On The Run* from Gremlin. The game that re-creates that definition of background music even on the already luscious Commodore. I understand that this will be appearing by the end of the month and the good news is that Gremlin seems very pleased with the conversion.

One game that I have got many inquiries about but very few hard facts is the Amstrad version of *Comanche* – in comparing terms it is not really that far behind the Spectrum/Commodore versions but it is so eagerly desired that it seems like ages.

In the meantime *Alligato* is cleaning up with the *Dance* title. A very playable game indeed but generally agreed to be not as good as *Comanche* on those machines where versions of the latter exist.

For the Spectrum, *Ultimate's* *Cyberman* has finally surfaced, only to be met with general disappointment all round – it's

## Britain's Longest Established Computer Games Company

As part of our continuing expansion programme we are seeking:

### COMPUTER PROGRAMMER

You will write software for 4862, Z80 and 68000 based home computers, specialising on one series of machines. You will be responsible to the Software Group Leader for your part of each project, co-ordinating with graphics and audio experts and supervising Trainees, as appropriate. You will be expected to show initiative and flair within a controlled working environment.

Aged up to 25 you will have proven programming ability, relevant experience and the determination to complete your work to the highest standards. You will be fully familiar with the operating system, strengths and weaknesses of at least one home computer.

Starting salary up to £10,000 per annum.

### TRAINEE COMPUTER PROGRAMMER

You will write software for 4862 based home computers, principally those based on the Commodore 64. You will work initially under supervision on conversions from other machines, but will have the potential to work on your own initiative.

Aged up to 25 you will have programming qualifications or relevant experience. Ideally you will be fully familiar with the Commodore 64.

Starting salary up to £3,500 per annum.

We are based in rural Oxfordshire midway between Reading and Oxford with excellent road and rail connections to London and Bristol. We are a young and progressive Company working on exciting new ideas and techniques and offer rapid advancement to staff of the right calibre. All posts are permanent.

For an application form telephone 0235 832939 or apply in writing enclosing your CV to:

**Recruitment, Hewson Consultants Ltd,

Abingdon, Oxon OX14 4RX**

## Adventure designers – growing numbers

*Tony Bridge evaluates a new adventure writer for the Spectrum, an area where the Quill has recently reigned supreme*

Until quite recently the only adventure-writing utility available to the general public (apart from one's own programming ability) was Gileotti's *The Quill*, which regular readers will know gets my personal vote for the most useful program ever released, and surely largely responsible for the current popularity of adventures. There are now a couple more such utilities for the Amstrad, but apart from the ill-fated *Graphic Adventure Writer* from Omega Software, *The Quill* has remained supreme for the Spectrum. But not for long, I think, if J Hyde has anything to do with it. A copy of his suite of programs called, with great imagination, *Adventure Writer* landed on the Grand Effie desk a couple of weeks ago, and it is certainly a viable alternative to the Quill itself.

The package consists of three modules: to edit the adventure writer, and a basic database written with the utility itself. The emphasis throughout the package is on ease-of-handiness, and I found the modules to be very much easier to use than *The Quill* (though a similar database style is used). The ease of use is evident from the start from the manual, which is a sheet of A4 folded in half but this is entirely sufficient for the average keyboardist like me.

The *Writer* is the first module, and it is this program that the author will use to construct the framework of his or her adventure. The editing manual are all driven by the cursor keys: to select the options and the plus and minus keys to change the values. From the colourful main menu you will be able to edit locations, object and command lists as well as setting the dimensions of the adventure – that you can select to change the number of locations (for example) or the number of objects and so on, each change affecting the

other values. The default values set at the start are 100 locations, 150 words in a location or object description and 100 objects, commands and recognised words; and although these can be changed, it is at the expense of the others, so a fine balancing act is called for.

Once the parameters of your adventure are set (up to 600 locations, even more are possible though impractical, and 500 words or 300 objects) the main menu allows selection of one of the other editors, each of which displays a sub-menu after choosing the number of the location, object or object to be worked on. The manual is very short but is hardly needed as each menu is almost completely self-explanatory.

Choosing the location editor displays the description box, changed to reflect the length that has been selected from the dimension editor, and into which you will type the description of the location. Beneath this is a list of directions available from the location together with the location to which each connects.

### Sudden death

The usual compass points are present as well as up/down and a couple of unusual ones – 'time' allows for a location to which the game jumps in certain circumstances (being offered a command that it doesn't recognise), useful for timing obstacles (for example "you hear footsteps approaching") while 'door' joins two locations together thus allowing for a longer description than you may have decided upon for the rest of the adventure. As well as these options, you may also be able to make the location an 'end' location, that is one which, when visited, brings about a sudden death finish to the game.

Via the command editor, the author then defines each separate command, telling the program which object the player must be carrying before a command is obeyed, what the computer's reply will be (often, a specific reply to help,

for example, may be given), any alternative input recognised and so on. Several universal commands, such as Save, Load, Inventory, Drop, Get and so on, as well as all the direction commands are built in, and do not have to be defined.

The object editor is a little different unlike the previous two sections which presented each location or command as its own screen, objects are presented as a list as each object can be described on one line. Against each number the author types in the name of the object, the weight and the starting position. The weight parameter is particularly interesting, with each degree of weight referring a different reply (so one or two means the object can be picked up – if your load is getting too heavy, you'll get 'you can't', don't be silly) and so on.

### Weird objects

That's all there is to planning your own adventure: the second module on the tape organises all the information together under your filename and creates a stand-alone game. The third program allows a printout of all the adventure data, though sadly only to a ZX or ZX compatible printer.

Last but not least is the example adventure, *The House of the Dead*, which shows the strengths and weaknesses of the system. The adventure itself is well worth playing with some interesting problems and locations. I particularly like the way in which the player must choose just a few of a multitude of weird and wonderful objects near the start. A few locations into the game, and you'll find a one-way connection to the correct objects must be carried, and the program very graciously gives vague clues which seem to make every object desirable.

The only drawback is that the *Writer* and the adventure it creates is in Basic and so the responses are typically 4-8 episodes. Of course, we have now been subjected to very expensive adventures with 80 second responses! The screen layout is a little pedestrian but a graphics utility is provided soon which I look forward to with relief. Mr Hyde's *Adventure Writer* is the best value I have seen for many months at just £3.95-£5.95 for the graphics utility from J Hyde, 585 Burton Road, Huddersfield, Cheshire, SK11 7DT.

### Adventure Helpline

Being confused? You're left alone in an adventure with nowhere to turn for advice? Here's a place to turn.

To be the expert, explaining your problems, send it to us, and a fellow adventurer may be able to help.

Remember – the experts only write if those adventurers who have solved the problem get to thank! Every week to *Games Advertiser Today* (GAT) would be appreciated.

## Doctor Who part 3 the story so far...

Time Lords order DOCTOR WHO to regain the plans of the Time Instant Replay Unit and thwart the 'evil' MASTER. Having tricked his way past the Madrag and numerous robot controllers, he enters the Factory Area, finds the electronic spinner and now seeks a route to Security to get the Pass Card.

Crossing the central lift shaft and riding the Monorail gets him to the R45 of the complex. After false starts he climbs a long ladder and crosses to some family-closed hatches. The dynamite from the mine may work. However, the spinner has the desired effect.

Investigating further reveals frantic 'CONTROLLER' activity - a sure indication of a sensitive area! Objects in the wall turn out to be security beams, causing General Alert. He retraces his steps, warns and then tries again.

Finally evading the guards he finds a room with 3 detonators and below a guarded and locked safe-room (containing the Pass Card). Two floors up a VDU gives him a clue for deciphering the de-coder card.

## Programming: C16

## TIME RACE

by Shane Dawson

The object of this game is to use the joystick to lead space barriers as played at random to block your way. There is also a 30 second time limit and once the time runs out the game ends.

You only have one life, and this is lost when you run into a barrier. Level one is quite easy, since there are only 40 barriers, but as you progress to the next level (after reaching the top of the screen) it becomes harder as more barriers are placed in your way. Forty more barriers are added at each level. Good luck!

### Program Data

| Variable |                      |         |                                    |
|----------|----------------------|---------|------------------------------------|
| J        | - Joystick (x value) | 100     | Clear variables                    |
| Y        | - Joystick (y value) | 140     | On start, put line 300             |
| A        | - Number of barriers | 40      | Set variables & colours & colours. |
| LY       | - Level              | 100-130 | Draw screen                        |
| TR       | - Time               | 100-130 | Random x and y values for barriers |
|          |                      | 140     | Print them on the screen           |
|          |                      | 140     | Colour of barriers                 |
|          |                      | 140     | Randomly                           |
|          |                      | 140-150 | Set time to 30 seconds             |
|          |                      | 150-160 | Check joystick input               |

## Programming: Amstrad

## SUBMARINE

by Daniel Bishop

This is a game for one player and as well as having an arcade appeal, it is also a game of deduction and sensory perception.

The spectacle is fairly straightforward: you are the captain of a fast sub destroyer

and have orders to locate and destroy an enemy submarine in your vicinity. However, you only have a limited amount of time and just less depth charges. To help you find the submarine you will have to listen carefully to your sonar soundings

When you run the program, the screen display will appear. The computer will then wait for you to either press a key, move the joystick or press the fire button. When you do this, the game will start.

The large blue oblong is an enemy sub

of the sea. The white symbol is your ship. You may change it and the area of sea but may not leave it. Neither may the submarine. At the bottom of the screen there are two gauges which show the current speed and helm position of your ship. Also shown are the number of depth charges and the time left.

To increase the throttle, push the joystick forward (or press the + key). To decrease the throttle, pull the joystick back (or press the - key). To bear left, push the joystick left (or press the D key) and to bear right, push the joystick right (or press the X key). Practice manoeuvring your ship. It may take some getting used to as bear in mind that the helm is more sensitive at high speed.

At the start the submarine will be out of sonar range. You must search the sea to find where the sub is hiding. Once in range, the sub will reflect the sound pulse of your sonar. You will hear the first echo shortly after each pulse is sent out. As you focus in on the submarine the delay between the outgoing and incoming pulses will decrease. Also your sonar will automatically start to pulse more frequently. You should learn to judge the range of the submarine by listening to the pulse between the outgoing pulse and its echo.

More program notes and listing next week.

For brevity's sake, this routine has not been error-trapped; if you input a string rather than a number into one of the data parameters, or even just `ENTER`, the program will crash. If you regularly boot from F2, change line 10 to:

1-800-855-1600, ext. 50

## Spectrum

**T**his week, we continue our series of machine code utilities. Header is a routine that reads the header information for a recorded file and provides details about the file.

As well as giving the name of the file and its type (eg. Byte program etc) the routine gives its length and starts in the case of arrays start is meaningless and may be ignored. For code, it indicates the address at which the code should be loaded and for programs it gives the first address from which to commence execution.

If the program does not auto-run, then the message "No Link" is displayed. Length indicates the total length (in bytes) of the file. The routine is called by *AssemblyLink* (see below).

Type in the code with the Loader program we printed in Vol 5 No 14 — which incidentally, will work a little better if you want M5 for a — start to finish. Then it

Also, on the subject of errata, we also publish this week the remainder of the Trace code, omitted in the earlier issue.

Small world, all right (Europe commercial) plus a  
Mitsubishi Challenge Invitational

## DATA TRANSFER

by Ian Cox

**Specimens-Actual** Data should be as shown in this table:

Spectrum Technology files are held on microdrive as code loaded to address 50000. The Last Move Data files can be transferred direct using the above command.

the status being determined by a negative port value. Thus  $ADP(r) = \delta$  indicates no character is available. Fig. 3 gives an Atari Basic program that takes the bytes and reads them onto disc in a format that the Word can use.

The computers are linked with the cable prior to switch-on and the programs loaded into the respective computers. The name of the file to be transferred is entered into the Spectrum together with its source.

The Atari Basic program is tiny, needing only a file name to begin. A .DOC extension is coded automatically to allow the Word program to identify it properly. After a short period of time the Spectrum screen should flash periodically and the Atari disc drive come on the state is transferred.

A fair bit of trial and error is needed, but using the ideas above it should be possible to make working copies of most Telexed files onto the Atari ST.

|              |        |             |          |                  |
|--------------|--------|-------------|----------|------------------|
| Epistemon    | EX-3   |             | 275      | stop             |
|              | EX-4   |             | 150      |                  |
| Group C      | (1750) | (connected) | 80 (175) | (10 way)         |
| plug (State) | EX-5   | in          | 3000     | plug (connected) |
| ground       |        |             | 1.0000   |                  |

ward, or can be loaded into memory and then transferred. Fig. 2 lists a very simple Spectrum Basic program that loads the Toward file, opens the channel and then makes the A/D converter read it.

All the Atari kind of things, are made of the `Open()` command. This results a byte from a selected input port, where the `(i)` suffix is used to specify the assignment. `in0(i)` results a byte from the `IN0000` port.

**M**any Atari ST users will have upgraded from older computers and like me may have quite a large collection of programs and document files and the daunting prospect of rekeying them into the new system prompted me to see if a way could be found to transfer the files using the BBOSS interface on the Atari.

My old computer system was a 486 Spectrum, Interbase 1 plus Monodrive and I had some 2 Mib of Tandem 2 and The Last Word files on microdrive cartridge. I have transferred almost all of them using the link and software described below with only a small amount of work necessary to convert them to .txt about files.

Although the `RS232` configuration, used connections and programs are for Spectrum-to-Spectrum transfer, `AS232` files can be transferred from any computer with an `RS232` port using this network. For example, there seems to be no reason why the `RS232` part of the `BBCC` microcomputer could not be used for this transfer process. A program would need to select the port using `FO$J`, then `IO$U` and `PR$M` commands to send the file. I have deliberately written the programs to be as portable and as simple as possible, without any complicating features - they only have to work once for each file transferred, not to look nice.

The **PRND** configuration on the Atari ST is set from OEM desktop as shown. The baud rate may be set to lower than 9600 if necessary, but in my system this was perfectly satisfactory. Any change should be reflected in the **FORMAT** command given to the other computer.

It took a good deal of trial and error before the correct pin connections were found. A flat ribbon cable with a Male 25 way D connector was used on the Specimen and a Female 25 way D connector on the other. The pin connections for the

## Programming: Bytes & Pieces

### Border on Spectrum

This is a short routine that creates a flashing border around part of the top of the screen. Alternate squares flash opposite to each other, so that a sense of movement is obtained – quite like a flashing neon sign.

It is called by a PH call and the three parameters are ink, paper and linen - the latter being the number of lines the host wants to draw. The answer

The rodline is protected from being greater than 50' and is located on the pole.

### Colour Control on BBC

by N Whiteley

Issue 7 on the B&G menu is the ideal mode for adventure programs and other games; applications which produce a lot of text since the characters are clear well defined and you have over 80K in which to write your programs.

But there is a problem in that if you're using colour, you start getting a mess. Chalk's got every line at least that you display (for paper, ink, flashing and double height) which not only takes a lot of memory, but is very hard to understand. Not only that, if you clear the screen all the paper and ink colour gets lost and you have to do it all over again.

Colour control is a very useful utility which saves memory, makes displays extremely easy to produce more elegant and when you close the screen, the paper and ink colour will still remain. Just type in the program and when you run it you will be given the command syntax, instructions and a demo screen.

## From Transfer on C64

When run, this short machine-code routine begins with character code located in RAM at \$0000 (\$3348 decimal) into RAM starting at \$2000 (12288 decimal). The routine also turns off and then tests or again keyboard and I/O interrupts.

If only one character set is required, proceed as follows: To scale a character set of 12500-13200 decimal, change the first three bits to 000000 from 010100.

To locate a character set at 14000-16000 change the 48 in line 20001 to 50. The "CP" 12 in line 50 will also need to be changed to "C0, 00".

When run, ignore the error in case  
mainloop() and fork() - (GOOD)

THE ULTIMATE IN COMFORT & FIT

**SUPERB GRAPHICS SOFTWARE  
PLUS  
A TOP QUALITY LIGHT PEN**

Discover the exciting world of creating your own graphics on-screen.

- **FREEHAND DRAIN** - 1 per 100mm in Cuffs
- **PAINT SHAPE** - for the artistic touch
- **FILL RIT SHAPE** - use 18 colours and 11 patterns.
- **GEOMETRIC SHAPE** - circles, boxes, triangles, lines & bands
- **UMBRAGE RUBBER-BANDING** on all garments options
- **INS-POUR FUNCTION** - for paint accents on all fabrics

Plus many more for numerous to mention in this ad. All these features in the Program in a big quality Light Pen and an instruction booklet in an attractively printed package. Ready to use for creating colourful pictures or technical drawings. Easy to use by all types of micro-users. Full back-up service from manufacturers. Available at good dealers or direct from Tinten Products.

1000

PROFESSOR DR. RICHARD LUTHE, UNIVERSITY OF WÜRZBURG

## WORK OUT THE WORD PUZZLE

There is the perennial part of the word grid where great rewards await you – specifically a Commodore 128C with colour monitor, two 5.25" 800 K disks with disc drives and 25 Microsoft games. Commodore 64 Spectrum and Amstrad owners will receive a copy of

|   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|
| L | M | O | N | A | R | F | W |
| T | H | E | D | I | T | O | R |
| U | U | C | T | F | E | F | X |
| P | S | H | F | R | P | T | H |

| U | C | B | H | R | D | Z | C |
| D | E | C | Y | D | M | L | N |
| R | H | Y | C | H | B | I | B |
| K | C | L | A | T | I | G | I |

*Spitfire 40*, while BBC owners will get *Strike Force Harrier*.

### How to enter

This is the third part of the competition and as usual the grid contains six words (of at least four letters) related to microcomputing. The words may be written forwards or backwards up or down (but not diagonally).

Once you've found the 18 words, you'll need to hold on to them for just one more

week. In the next issue, you'll find full details on how to enter, together with the official entry form. If you've stayed with it so far (and you all have, of course) it would be immensely foolish to miss out next week's issue. So why not have a word with your friendly local newspaper?

## THE NEXT STEP

After the games and the trivia begin to pall, unlock the power of your Amstrad with **AMSTRAD ADVANCED PROGRAMMING TECHNIQUES** by David Lawrence.

This book is intended to show you how to develop serious applications programs for use on your Amstrad CPC 464 and 664.

The book begins with a look at the advantages of modular programming, which makes subsequent checking and debugging on your routines much easier. There follow chapters of debugging, proper methods of inputting information, string handling techniques, error trapping, storage and retrieval, data structures, sorting and searching.

At each stage there are handy hints and tips which suggest new ways of tackling problems.

# WANTED Z80 PROGRAMMERS

Odin Computer Graphics require both freelance and full-time programmers to work on new and existing products. Experience within the industry is preferred, preferably through the writing of games software on any of the popular home computers.

Our rates of pay are extremely attractive with a good working environment and excellent perks.

*Apply in writing enclosing a C.V. and if possible, samples of your work to date.*

*Mark the envelope:—*

For the attention of Keith Robinson  
ODIN COMPUTER GRAPHICS LTD,  
The Podium, Steers House,  
Canning Place,  
Liverpool, Merseyside.

## REWARDING OPPORTUNITIES WITH MIKRO-GEN

Following Mikro-Gen's move to new premises we now require additional staff. If you believe your programming ability meets our high standard, please contact us by telephone or letter to the address below.

We also require finished programmes. Top payment or royalties given to software of suitable quality.

Mikro-Gen, Unit 15, The Western Centre, Western Road,  
Bracknell, Berks. RG12 1RW. Telephone number (0344) 427317

### Competition Results

## COLOSSUS CHESS 4 WINNERS!

**M**any thanks to everybody who entered our Coliseum Chess 4 competition (Popular Computing Weekly March 8). We had a tremendous response so it's taken a while to sort through them all, especially as the entries were of a very high standard.

The solution to the problem, shared by the market with the very month of March, is a contract to acquire KITT Black has no

nitrate, ammonium, and phosphate. Effluent is  
flow monitored.

## Commodore

**Program: Astro Type Arcade Machine** Commodore 16 Price £1.99 Supplier: Malsbourn 6-10 Paul Street London EC2A 4JH

**Program: Dr Who and the Mines of Fear Type Arcade Machine** Commodore 64 Price £19.95 Supplier: Mico Power Northwood House Northwood House North Street Leeds LS7 3RA

On the BBC this program was a special 1st special in a market that didn't see much by way of huge multi screen arcade adventures.

On the Commodore 64 it's another story. At £19.95 that puts Dr Who in the mega

league and if that's not

it isn't quite just a bog standard coded game like there were after such as you might find on countless £1.95 Mastertronic games. But the additional £1.41 isn't added up all that much. The Doctor has to find and disable a nasty time device being built by the Master. He is aided not only by his wife but also a cat called Splice which provides control.

Solving the game is partly a matter of figuring out what to do with what objects and partly a matter of the creative use of Splice. A separate menu is used to issue instructions like follow go to a marker (which the Doctor can place in strange locations) and pick up an object. Combinations of all three are required to deal with some problems.

Quite ingenious, reasonable to look at, moderately addictive, slightly original, too expensive.

**Program: Air Star Type Arcade Machine** Commodore 16 Price £1.99 Supplier: Malsbourn as above

Pick of the week

## CAD PAK

**Program: Cad Pak Type Unit: 1 Machine** £1. Price £14.95 Supplier: Desktop Systems, Glasgow, Tyneside, Dyfed BT24 5AJ

Don't be confused. Despite the title, Cad Pak is really another graphics package for the 64. The main difference between it and the Sector off chip package (as was) is that it has relatively fewer features, but is easier to use and half the price.

Graphics programs are not of the line series where lines actually have some value, partly because of the obvious visual similarity of expressing a graphic idea via a graphic command. Cad Pak has just about everything you could need: instant circles, squares, multi-sized figures, cut and paste, text spray paint, various kinds of shading and fill.

One nice touch is a little box in the bottom left of the screen which shows you

what you will get if you execute a particular command. So easy is the package to use that there is virtually no need for a manual - just as well really since there isn't one. I could have done with a couple of pages worth, though. An excellent low priced alternative is the Sector pack.

US Gold, Unit 18 Parkway Industrial Estate, Hereage Street, Birmingham

**Program: Golf Construction Set Type Strategy Machine** Commodore 64 Price £12.95 Supplier: Amsoft, 66 Lang Acre, Covent Garden, London WC2

**Program: Football Type Arcade Machine** Commodore 64 Price £9.95 Supplier: Malsbourn House as above

**Program: Starboard Type Arcade Machine** Commodore 64 Price £2.95 Supplier: OSD Thomas House 295

Parkborough Road Parkborough Hampshire GU14 7NF

**Program: Star Play Type Strategy Machine** Commodore 64 Price £7.95 Supplier: Apple 85 Tite Farm Lane, Basing Park

**Program: Tournament Snooker Type Strategy Machine** Commodore 64 Price £7.95 Supplier: Magnificent 7 as above

## Plus 4

**Program: Inferno Soccer Type: Strategy Machine Price: £14.95 Supplier: Eidos 45 Banbury Road, Widen, Cheshire WA4 4JH**

## QL

**Program: Gobble Gobble Type: Arcade Machine QL Price: £2.95 Supplier: Eidos 45 Banbury Road, Widen, Cheshire WA4 4JH**

**Program: Overdrive Type: Arcade Machine QL Price: £14.95 Supplier: Labochrome, Rue de France, 113 4000 Liège Belgium**

**G**obble Gobble is a QL game from Belgium and in so far as it looks a bit like a slightly dated Space Invaders title it is pretty good by QL standards.

Absolutely standard control and dodges - you are a rather hapless looking knight and

£2.95 Supplier: Melbourne House as above

**Program: Delta Wing Type: Arcade Machine Spectrum Price: £2.95 Supplier: Mastertronic, 6-12 Paul Street, London EC2A 4JH**

**M**aybe we've just been saturated with flying time-defeating light games, but it's a little difficult to get very enthusiastic about Delta Wing. It's really just a leads fly the plane, shoot up the boxes and enemy fighters after. Ground is a slab of green, sky a slab of blue. All other graphics aside from your cockpit (which is rather neat - fuel, moves, air, joystick etc) are black line only white. OK, but so more.

Flying games all come somewhere on a scale of pure simulation (learning to fly the plane is) to shoot-em-up (shooting the boppers is). This is about 40% fly and 60% blast away.

I should say that Delta Wing is only £2.95 which makes it pretty cheap compared to the competition, but unless you don't yet have one of the countless other similar programs there is no great reason to buy this one.

There is one point of relevance to game players who have (a) interface 1 and (b) a friend with a Spectrum. On the other side of the tape is a multi-player version of the game where you play against one another as though pushing two separate aircraft (a, each player appears on the other's cockpit screen as the enemy).

That may prove to be a different game entirely and lots more fun. Under those circumstances I'd say buy, buy, buy.

**Program: Boulder Type: Arcade Machine Spectrum Price: £7.95 Supplier: Grand Graphics Alpha House, 10 Garner St, Shetland ST 4PS**

**B**oulder was originally released on the Commodore 64 where it achieved quasi cult status. Now the game has been converted to the Spectrum complete with full monochrome screen display.

The entire justification for the game's existence is its originality: it scores at least 90% in this critical area where other programs barely match up a single bare point. The presentation is rather hard to sell.

The game works like this: imagine you are looking down on a ball hovering over a scrolling landscape you see the ball as getting bigger when it bounces towards you and smaller when it hits the ground. Your task is to control the ball, bouncing it only on safe areas of ground avoiding assorted nasty things and landing on various bonus squares that offer loads like extra lives.

The object of the game is simply to get your ball into the goal, but this requires not only very careful control of your jumps but also making a leap - or some paces there is only one route forward. Boulder looks nice and is very original. I found it fresh and rather addictive, but the determined may well love it.

**Program: Power Post II Type: Utility Mosaic Spectrum Price: £7.95 Supplier: Butterfield, 14 Warrin Avenue, Riddlesden, Rotherham, Yorkshire**

**P**ower Post II is an interesting utility from Butterfield. It shows you

in design various parts of banners and posters using that just about as large as you want. The greatest virtue of the system is its extreme ease of use. Write post text, draw a window to represent the size you want the text to be and then choose your text style - a mixture of any one of two fonts and 64 overlays (different kinds of italics) - then print it.

I have to say that I found a good many of the screenscreens, including many of those illustrated in the manual, rather ugly but there is enough choice to find something you fancy.

As is the program is designed to work with dotgy old 32 style printers, but there are some fairly comprehensive instructions on using the system with most of the common interfaces.

**Program: Questprobe Type: Adventure Mosaic Spectrum Price: £5.95 Supplier: All American Adventures Ltd, 10 Parkway Industrial Estate, Harrogate St. Remington ST 4LY**

**W**hen Adventure International first started to release adventures based on the Marvel Comics superheroes they received mixed reviews for being grosslyly gaudy and but technically inventive class in the design.

Now US Gold under the All American Adventures banner has taken on the Marvel series. Next up is Questprobe featuring the Fantastic Four and the Thing and there are reasons to be more optimistic about its long term adaptiveness.

You play not one but two superheroes: the Thing and the Thing and can change which viewpoint you are playing from at any time. Your task is to rescue Alicia Masters from the grip of Dr Doom who is not a nice guy. Among other wacky people you might meet are the Ghouls of Death is tough a minute. All locations are illustrated with some pleasing if not outstanding graphics.

Working with two characters certainly adds something to the game and I was reasonably inclined to keep playing even though it took me half an hour to figure out the first thing to

**Program: Tito Type: Arcade Machine Spectrum Price: £2.95 Supplier: CSD as above**

there is the inevitable princess to be rescued.

The screen is packed of castle rooms, dungeons and towers and the whole thing is littered with (and objects that do silly things like make your knight run backwards, etc etc).

Not actually a bad game, just a little tired looking. Wendoline may be worth all the trouble of ordering from Belgium if you absolutely love Asterix-style games. O.K.

## NEXT WEEK

The next issue of *Popular Computing Weekly* is the start of something big in addition to the usual features - hot news, exclusive reviews, programming tips - you'll find the first of a series of supplements.

Every second week we'll be looking at a different aspect of microcomputing - some supplements will examine particular machines, others will look at music, graphics and education.

The series starts with a bonus for Commodore owners and will include:

- **Commodore word processing**  
New packages including *Paperclip* and *Cut n Paste*
- **80-column displays on the 128**  
How to get business-standard displays without investing in a £200 monitor.
- **Alternate realities**  
A profile on US simulation specialist Microprose with a look at two of its new products, submarine action in *Grand Service* and serial thrills from *Amstrad*
- **Plus**  
A look ahead to next month's Commodore Show. Order your copy now
